EDUCATION

Carnegie Mellon University
Pittsburgh, PA

B.S. Information Systems
Expected May 2030

EXPERIENCE

Swoveralls / DEFI Snacks — Marketing & Product Operations
Internship

June 2026 - Current

- Produced marketing imagery for DEFI Snacks, a D2C athletic-nutrition brand, using FLORA AI, iterating on prompt design and asset variations to meet brand consistency and platform-specific requirements across Amazon and web listings
- Conducted competitive landscape and vendor research (D2C snack/nutrition market positioning, Shopify subscription-app evaluation) to support go-to-market and recurring-revenue decisions for an early-stage brand launch
- Operated with direct founder/CEO access in a fast-moving startup with undefined scope, independently managing priorities across creative production and research workstreams

PROJECTS

SAKSHI: Self-Reflection Journaling Tool

June 2026 - Current

Independent Project — Live at sakshi-mocha.vercel.app

- Designed the product and interaction model for an AI journaling tool from a specific design philosophy (non-directive reflection, no persona or advice), translating an abstract principle into concrete, testable specs
- Prototyped interface in Figma, including the input-classification override flow, to validate interaction design decisions before implementation
- Directed iterative development using Claude Code as an execution partner, running an 8-case regression test suite plus live testing across text, voice, and upload inputs to validate output against acceptance criteria

STENCIL: Organizational Values-Alignment Platform

July 2026 - Current

Independent Project — Live at stencil-mu-seven.vercel.app

- Designed and built a full-stack tool that surfaces whether a company's stated values are reflected in real project work, with privacy enforced at the database layer via Postgres Row-Level Security rather than application code
- Built and shipped MVP using Next.js, TypeScript, and Supabase; directed iterative development via Claude Code, verifying every fix against the live database rather than trusting code review alone. Caught and fixed a pattern-detection bug that had silently failed since initial build
- Deployed to production on Vercel; scoped and prepared a pilot recruitment plan to test the tool with a real organization

VICHARA: Longitudinal Scripture Reflection App

July 2026 - Current

Independent Project — Live at vichara-kappa.vercel.app

- Designed a journaling app that identifies patterns across a user's saved reflections over time, reversing the standard "mood → recommendation" model used by existing scripture apps
- Built and deployed full-stack app (React Native/Expo, Firebase, Cloudflare Workers) with AI-driven theme clustering; validated design with a 27-entry real-data test before finalizing the interaction model
- Live in production at vichara-kappa.vercel.app

NASTP (North Attleboro Senior Tech Program) Co-Founder
Volunteer Initiative

August 2023 - Current

- Co-founded and led a volunteer initiative delivering technology education to senior citizens, coordinating 30+ student volunteers across 10+ senior center locations in 5 towns; contributed 250+ hours through group seminars and 1:1 sessions covering AI literacy, information tracking, and device use
- Secured a Massachusetts Broadband Institute grant (Connected & Online Program), securing 50 laptops for residents at the Branches of North Attleboro
- Earned a letter of support from MA State Representative Adam Scanlon and was featured on the North Attleboro Town Manager's "Town Hall Talks" podcast
- Recognized with a NorthServes Volunteer Award for the initiative's community impact

SKILLS

- Product & Design: Product specification & requirements writing, interaction design, UX prototyping, design tradeoff analysis, structured QA & regression testing, AI-assisted development workflows
- Leadership & Community: Volunteer program development & coordination, grant acquisition, cross-organization partnerships (government, nonprofit), public speaking & community outreach
- Tools: Figma, Claude Code, FLORA, Shopify
